In the master's thesis - physical-geographical cartography of the Yalno range and the surrounding areas, an attempt was made to find cartographic material of the Yalno range, Martafe and the territory of the Yalno physical-geographic station. Also, on the basis of modern views and observations of the master's student, an attempt to map the cultural landscapes of the mentioned objects and present all these materials in the form of a collection of maps.

The paper provides a physical geographic description of the area of the Yalno station, landscapes and analysis of some features, as well as a collection of physical-geographical, landscape and some landscape features maps. The cartography of the cultural natural-territorial complexes of the foothills landscapes of the Yalon range has been carried out. Some issues of landscape mapping in relation to the 2000 Landscape Convention of the Council of Europe are discussed. A comparative analysis of the map of old natural-territorial complexes and new cultural natural-territorial complexes of foothill landscapes of the Yalon range is given.

The work is done based on literary and cartographic sources and on the basis of the analysis of materials collected as a result of conducted research.
